

Asbestos removal and installation of a photovoltaic system

Project description

With the contribution from the ROP ERDF 2014/2020 – AXIS 4 – Parisienne S.p.A., as part of the restructuring of its production site, has provided for the removal of asbestos in the roof and the construction of a photovoltaic system for its own consumption.

Objectives

To improve the quality of the working environment by removing a potential source of pollution and to save energy in our industrial cycle while at the same time reducing CO2 emissions into the atmosphere, thus contributing to the fight against global warming.

Results

The photovoltaic system will have a capacity greater than 100 kW, saving over 140,000 kWh per year, which is equivalent to 2,618 tons of oil per year, saving 61.6 tons of CO2 per year.

Project co-financed by the European Regional Development Fund
